

Introduction

[This part is more of a video than an interactive element]

The game begins with the astronaut's point of view as he wakes in a bed in the pilot's cabin. Through blinking eyes, the player watches as the astronaut examines his surroundings from a bed: metal walls, a screen with a map of spaceship, many controllers and buttons, a window that gives him a glimpse of the stars outside. The astronaut reaches for his pocket and finds a personal card handwritten in English: "we are all counting on you to bring home the antiviral medicine to cure zadotitis. If you look out at the sky, know we are here rooting for you all the way from Earth!" The astronaut gets a sudden headache and sees this series of vague flashbacks: saying goodbye to his family on Earth, his spaceship alarm going off for low fuel, crashing on an unfamiliar planet, alien hands gently carrying him.

Pilot's cabin

[player now can control the astronaut's movement for the rest of the game]

The astronaut begins exploring the room. He makes the first attempt at communicating with the aliens, realizes they speak different languages, and begins to gather clues about their words. Here is a list of things he can click on in the room to view more closely. They should offer him clues that he can return to whenever needs:

- **A ringing message notification on the big screen:** this is the first thing that draws his attention, and his first interaction in a chatroom with the aliens. He quickly realizes they do not speak the same language.
- **The window:** the view outside the window includes a dark sky, stars, and a somewhat close red planet, Mars
- **Label on his bed:** the astronaut can see that there is information about him written in a different language with a latin alphabet. He cannot decipher it when he first sees it:
 - Rom:?
[(translation: planet:?)(this implies that the aliens do not know what planet the astronaut comes from, and it gives a clue about rom being the word for planet)]
 - Puacarda x 2
[(pua+carda - translation: anti-zado virus)(this implies the aliens have been giving the astronaut antiviral medication twice a day to try to heal him.)]
- **Posters #1 and #2 on the wall:** posters of Jupiter and Mars labelled "fannarom" and "desarom" (the prefixes don't matter here. The point of the posters is to give the astronaut a clue that "rom" refers to planet, and that the prefix before it refers to some attribute of that planet)
- **Interactive liquid dispenser:** a liquid dispenser (maybe it can look like a water cooler) with 3 different options. The first two, labelled "tito" and "bibi" (random words) produce two slushy liquids with different colors. The third, labeled "doda" produces clear water.

This should help the astronaut consider putting aqua and rom together to describe earth as the blue planet/water planet.

- **Door to clinic:** a door with a key. When the astronaut turns the key, he sees the prefix before the word “locked” change. He must keep turning the key until the correct prefix (un-) appears. Once this is achieved, the door unlocks and he enters the clinic..

Clinic

In this room, the astronaut looks for the correct antiviral medicine. By seeing his own picture in the “pre-/post-treatment pictures” he figures out the name of the earth virus in the alien language. He then must pick it correctly from the pill bottles.

Lab/factory

In this room, the astronaut learns the verb “go” by exploring the mechanics of medicine filling. For example, he may interact with a machine that says “go/stop” in the alien language.

Bridge

Now that the astronaut has secured the medicine and knows enough words (hopefully) to say “go to water planet”, he must return to the pilot cabin (or unlock a new communications room?) to chat with the aliens and communicate that he wants to return to earth. The game ends with the astronaut taking off for home, medicine cargo in-hand.

–

Player is special astronaut selected to retrieve a cure from Planet 999 for Earth, which has been infected by a virus *game starts showing this memory*

Last thing they remember is crash landing into the planet with a ship that has low battery

Then, they wake up not knowing anything else in a benevolent alien spaceship

Stage 1: Figure out what’s going on

Stage 2: Get antivirus for themselves

Stage 3: Get antivirus in bulk from lab

Stage 4: Communicate to alien that they want to go home

Ultimate goal: communicate to the aliens that we need to go home
