

Feedback on Prototype (by Monday)
(Red: most important/urgent)

Pilot's Cabin

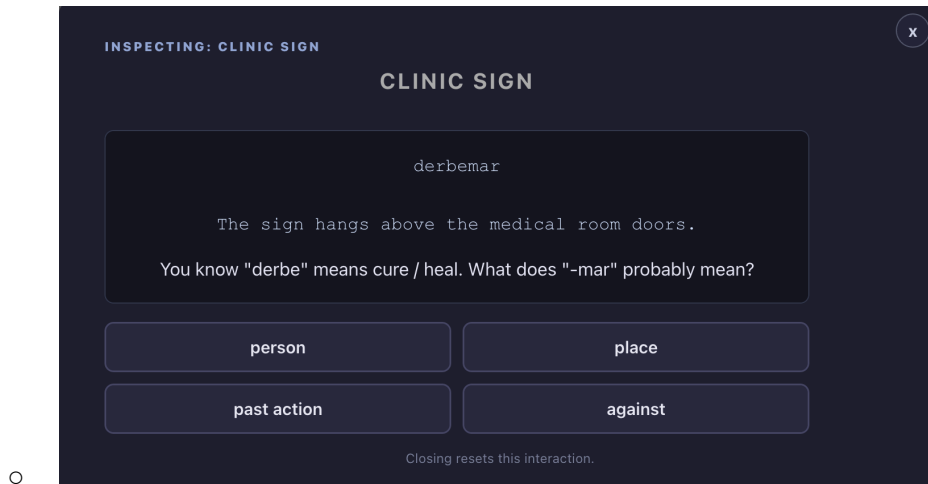

- ~~Opening scene:~~ the first message that the player sees needs to give a little more context to clarify that the astronaut is in a spaceship. On the “waking up” message, perhaps we can say:

~~Ouch. My head hurts. Where am I? > I see metal walls, strange technologies, and the stars outside. It seems I am on an alien spaceship. > There is a message in my pocket. I must have carried it with me from Earth: “we are all counting on you to bring home the antiviral medicine to cure zadotitis” > all the writing in this spaceship is in an unfamiliar language. I need to learn some words so I can find the cure to zadotitis then tell the aliens that I need to go back to Earth! > Time to gather some clues from the words around me.~~
- ~~Opening scene also triggers even after reentering the room~~
- ~~Label on bed:~~ remove the icon with an alien face on the label since the label is meant to give information on the astronaut himself.
- ~~Crew Roster:~~ sometimes, the puzzle says cure, and sometimes, the puzzle says cure/heal. Fix this inconsistency (not just limited to this puzzle)?
- ~~Liquid dispenser:~~ is there a way to make this part interactive rather than tell the player what each button dispenses through text?
- ~~Bed Label:~~ I think it would be cool if the bed label was the first thing the player sees, but they can't understand it until they figure out al and rom (maybe there could be a different description depending on which words they have unlocked)
 - ~~is it possible to have this be a tiny understanding check — the subtitles give it away immediately, it could be a text box that the user writes what they think it says? it could be something they see first and then revisit before the lock as an understanding check~~
 - ~~The example is the solution (“you planet”) is the actual answer~~
- ~~Instead of questions, maybe we have pictures to prompt the player to discover the roster and same thing for the planets.~~
- ~~Planet posters:~~ change either desarom or fannarom to be dodarom (earth) — for consistency
- Same thing for message screen? Include some avatar doing it instead of a text description

Clinic

- ~~Medicine Shelf:~~ second puzzle seems a little bit silly — it's just puacarda
- This puzzle can be immediately solved at the beginning (maybe only pop up after exploring the clinic more?)

- I don't think we need to refresh their memory w/ 'derbe'. Recall should be done by the player

- Health bar still goes down after he takes the medicine...
 - Also, can the health bar flash when it's getting lower? And maybe gets nice and green after he takes the medicine

Laboratory

- ~~Damage storyline + sequencing: I think we can remove references to the lab having been damaged. I am unsure what they add to the storyline?~~
 - ~~Similarly, I think we can remove the sequencing station where the player has to piece together a series of events. It seems enough for the lab to be the place where the player refills the medicine.~~
- Lab Sign: Obscures the name of the location
- ~~Overall Look: Tooo glittery/sparkly imo~~
- Destination Map: I think it would be cool for the student to figure out earth is water + planet on their own (or at least remember dodarom from the first room)
- Again, i don;t think the prompt should refresh the player's memory

INSPECTING: LAB SIGN

LAB SIGN

crutamar

A room sign marks the production lab.

You know "-mar" marks a place. What does "cruta" probably mean?

science / lab work

fly / go

water

lock

Closing resets this interaction.

Communication

- ~~Vocabulary review: before we move the player to the communication room, perhaps we can prompt him/her to review the vocabulary they have collected so far? A message like:~~
 - ~~Before going in to speak to the alien, I can take a moment to look at the words I have uncovered so far.~~

Bridge

- ~~In the final, alien says the English word "verified". Either don't say this or come up with some fake word?~~
- ~~Maybe it's better to split all morphemes into pieces to make the puzzle more difficult?~~
- ~~Highkey this is also kinda quite sparkly/glittery~~

Other/general

- ~~Replace all "BLAH" with "the alien language" (I don't think we need to give it a specific name?)~~
- Overall, I'd like to see the "puzzles" all be much more interactive (and maybe less directly questioning the user, i.e. What does "-nu" seem to mark?). I feel like this would make them feel more like an escape room/puzzle. Currently, it seems like really simple multiple choice that doesn't contribute much to learning, and it's too easy for the student to mindlessly click until they get the correct answer.
 - For example, show images instead of just all words
- ~~Pop-ups when starting each new room: let them review them if possible, or be able to re-read. Both next and back buttons~~
- Word bank / list be on the side so they can access it when they click on a pop-up

- At 20%, red flashing. At 15%, have opportunity pop-up, they have one chance to answer a question: three unrelated alien words appear and they have to match the right english word to the alien word. If failed, at 5% a similar pop-up appears, but this time it's a short sentence and they have to type it in. if failed, allow to go to 0%, and then restart? Maybe also have an option to store an extra puacarda/healing method
- After completing one of the pop-ups, player can revisit the popup with the correct answer they inputted instead of resetting
- Mission log
- Some sort of tutorial to teach mechanics (people won't read lol)

Game name ideas pool (we can vote for one):

- al
- Return to Dodarom
- Puacarda

Notes:

Mini-tutorial

Missions or goal bar instead of a timer?
